

## First Sprint – Review

- Story points planned: 7
- Story points completed: 7

In this first sprint we have not had any technical problems with the code, we have completed it on time. The only difficulty we've had is using GitHub. However, we have managed to load the entire project in the repository and solve the problem.

We have completed all the stories in the allotted time, two days before the end of the sprint to correct possible bugs during those days and complete all the documentation.
